10 Mares make up the herd

Spring 2020 was very wet and the horses did very well all year.
Spring 2021 is rain deficient, with very little water in the creeks if any. There is water in the lake. The grass did not get very high. At this date the horses look fine and hopefully there is enough forage to keep them healthy all year.

12	F	Dark Bay	Daughter of Black	2/13/14 3.5 yrs	Daughter of Black **#1,**

This was a good year with rain for water in the pond and good grass. Horses look great!

Reduced herd to below 20 due to the continuing drought and resulting reduction of available feed and water. Could adopt more if an interested adopter is found, most likely #11 and 12. No stallion present so there should be no foals.

April 2018 Check Mark (Blind) is not with herd and presumed to be dead.
2020 Black is not with the herd and presumed to be dead.
